# Designer Software
email account setup on the new server

***To change settings for the e-mail:***

- open Designer 6.4 and go to **Internet** module
- select one of the icons (eg. **Mail to be send**)
- go to menu on the top, expand **Tools** and click **Configuration**
- in the **Mail accounts** window click **New** or select existing account on the list, then click **Properties**.

Enter your **Account name** and click **SMTP service configuration** in the **Configuration** window

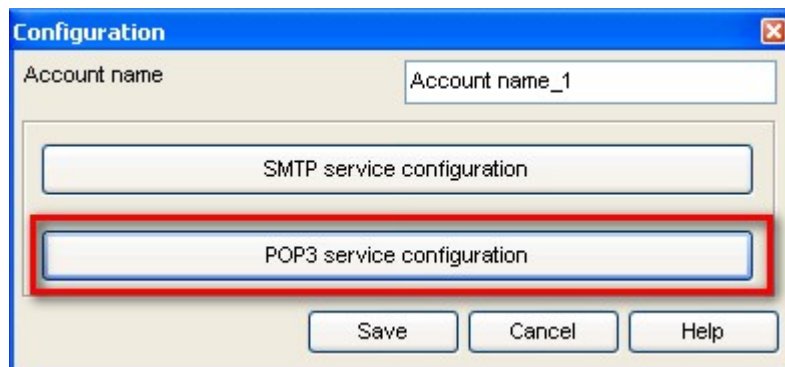

Enter **Address** and **Port** in **SMTP connection configuration**

- **Address:**   **smtp.komandor.com.pl** (default) or mail.komandor.com.pl (alias)
- **Port:**   **587**

Click **OK** and go to previous window - **Configuration**, then click **Pop3 service configuration**

Receiving e-mail configuration:

enter **Address** and **Port** in **Pop3 configuration** window

- **Address: pop3.komandor.com.pl** (default) or mail.komandor.com.pl (alias)
- **Port: 110** or **1010**

Click **OK** button, then click **Save** in **Configuration** window

POP3 configuration

Server

Address: pop3.komandor.com.pl

Port: 110   Timeout 200s

Name: accountname

Password: *********

[OK]   [Cancel]   [<< Help]

composed of the name of the account assigned by administrator and the POP3 server address separated with / mark, e.g.: test1/mail.komandor.pl

It can appear that it will be necessary to set "Manual configuration" in the Norton Antivirus program options also. It can be done by activation of the „Options" button, and next „Internet" -> "E-mail protection" -> "Advanced" -> „Switch on manual configuration".

In this field you have to enter first part of your address, example: if the address is johnsmith@komandor.com.pl enter **johnsmith** in this field
